Basic aims
The course of Parks, Gardens and Urban Greening studies the subject of urban green spaces, studying their functions, the numerous different typologies, their problems, enjoyment, ordinary and extraordinary maintenance and managing. The several study-case that will be studied during the lectures and the field trips will take into considerations the different typologies of green spaces, from small community gardens to the greatest peri-urban parks.

Acquired skills
The course is aimed to provide all the tools necessary for the deep analysis of an urban green space, both newly born and very important from an historical point of view, in order to lay out the correct criteria of recovering and management of the urban green spaces.

**Prerequisites**

Botany, agronomy, horticulture

**Preparatory instructions**

Botany, agronomy, horticulture

**Learning materials**

**Other info**

The exam consists of an oral examination on all the topics presented during the course, including technical tours and seminars that have eventually been
organized during the course. The interview will be represented by a minimum of three questions that will assess the knowledge of the subjects and ability to apply the concepts learned during lectures to the reality of the urban environment.
